

November 11, 1996

Dr. Howard A. Popper
999 Walt Whitman Road
Melville, New York 11747

Dear Dr. Popper:

I first met you for a preliminary examination during July 1995 and both my wife and I were immediately impressed by your expertise and more importantly by your caring type of professionalism.

I contacted a number of your patients in accordance with your suggestion and all sung your praises and highlighted your patient and family concern and caring.

Under your most capable hands, I had ten implants with absolutely no problems, which as you know is quite a feat because of my CLL condition. During the next phase you were always available for me even on Sundays to clear up an area of concern.

The work was fully completed during June 1996 and from that date I have better teeth than when I was sixteen.

The most singular and most outstanding quality that you have is that you care about your patient and care about the continuing high level of your work, through continuing study and research.

Based on my personal experience, over an extended period of time, you have my unqualified endorsement and I can highly recommend you, without any hesitation whatsoever.

My family and I send our kind regards,

Sincerely,
